

'THE SPRAY'

PRODUCT NEWS FROM KENSO AGCARE

Nugget – Knockdown Herbicide

A premium Glyphosate formulation exclusive to Landmark!

Product: Nugget – Knockdown Herbicide
Active Constituent: 500g/L Glyphosate
Herbicide Group: GROUP M HERBICIDE
Pack Sizes: 20L, 110L-Tallboys, 1000L
Primary Uses: For the control
APVMA Approval Number: 55645/20/1207

About this product: Nugget has been used by growers across Australia for many years. Nugget contains a new age surfactant system that offers convenience and peace of mind. The 500g/L active loading means less drums and volume to handle but allows for quick pumping times from 110L drums. The surfactant in Nugget has the added bonus of being 'frog friendly' approved and is therefore soft on the environment and registered for aquatic uses.

Nugget features and benefits:

- Fully Loaded
- 2,4 D Amine label compatibility
- Quick uptake
- Rainfast after two hours
- Trifluralin compatible (after two hours)
- Quick brown out
- Aquatic and horticultural uses registered
- Highly concentrated (500g/L Glyphosate)
- Less drums and handling due to concentration
- Flexible packaging options (20L, 110L Tallboys, 1000L)
- Fully serviced by the Kenso Agcare field team for agronomic and best use advice

*Rainfast: Nugget is rainfast after only two hours. Growers can spray with confidence knowing that a good result will be achieved even if a rainfall event occurs shortly after the application.

*Trifluralin compatible: The rapid uptake also allows a one pass operation with Trifluralin; growers can incorporate Trifluralin after allowing only two hours uptake of Nugget instead of 6 hours as per many glyphosate formulations.

Metsulfuron	Ken-Met 600

Summary on Nugget:

- A premium Glyphosate formulation that saves growers time and money
- Less packaging and handling than 450g/L Glyphosate formulations
- Rainfast after 2 hours and Trifluralin compatible
- Aquatic use registered, environmentally friendly surfactant
- Fully backed in the field

Guaranteed to perform

Our products are guaranteed to perform when used as directed or your product is replaced. Kenso Agcare produces and distributes a wide range of quality crop protection products for use in Australian farming systems.

As a division of Kenso Corporation, we have over 30 years experience in agricultural chemical manufacture and formulation. From our three modern production sites we are able to efficiently cater to the seasonal demand peaks of the Australian market. We also have a dedicated product development and quality control chemistry team which provides the capability to design robust product formulations for Australian conditions.

In line with our motto “Better Crop Production for a Growing Population” Kenso has the vision of being recognised as a world class supplier of crop protection products for Australian growers.
